## **ANESTHESIA BILLING SERVICES**

The Anesthesiologists are the unsung heroes during surgery. While their role is either not understood clearly or marginalized, it remains their responsibility that patients undergoing surgery feel no pain and wake up from sedation after the surgery is complete.

The responsibility of an Anesthesiologist starts during the pre-surgical phase when they determine the drug amount and also need to monitor the patient's activity during the surgery and adjust the dosage provided. While they take on a critical role, we ensure to be billed correctly for their services and get reimbursement to the maximum.
