## **PHYSICAL THERAPY AND REHABILITATION BILLING SERVICE**

The therapist used for therapy is intended to help improve your quality of life by fixing your body's natural functionality. The wounds or illnesses treated could affect your joints, muscles, tendons, ligaments, bones, spinal cord, brain, or nervous system.

Rehabilitation can not only improve the physical part of your well-being but your cognitive state as well. That treatment may differ by age, especially with pediatric and geriatric therapy.
